AwsClient Documentation

Method	Description	Example use in the demo
public static AwsClient login (String accessKey, String secretKey)	Factory method for the wrapper	AwsClient client = AwsClient.login(args[0], args[1]);
public String createEC2(String ami, String instanceType)	Creates EC2 instance and returns its instance id. The ami refers to a path which the AWS SDK will resolve to the actual ami	String ec2Id = client.createEC2("/aws/service/ami-amazon-linux-latest/al2023-ami-kernel-default-arm64", "t4g.small");
public void associateEc2WithIaM(String instanceId, String instanceProfileName)	Assign to an EC2 instance an IAM instance profile	client.associateEc2WithIaM(ec2Id, args[2]);
public String createS3(String bucketName)	Create an S3 bucket	String s3BucketName = client.createS3("demo-bucket-6019");
public void uploadToS3(String bucketName, String fileName) {	Uploads a single file to a S3 bucket	client.uploadToS3(s3BucketName, "Ec2Demo.java");
public void ssmToEc2(String instanceId, String command, boolean wait)	Get an EC2 to execute a CLI command. Specifies whether the command should block invoker program flow or run concurrently	client.ssmToEc2(ec2Id, "aws s3 cp s3://demo-bucket-6019/Ec2Demo.java .", true);
public void terminateEc2(String instanceId)	Terminate an EC2 instance	client.terminateEc2(ec2Id);
public void deleteS3(String bucketName)	Erase and delete an S3 bucket	client.deleteS3(s3BucketName);

public boolean checkEC2InitializationStatus(String instanceId)	Check if an EC2 is fully running and returns true if yes	client.checkSSMCheckInStatus(ec2Id)
public boolean checkSSMCheckInStatus(String instanceId)	Check if the SSM of an instance has successfully checked in with AWS systems manager and returns true if yes	client.checkEC2InitializationStatus(ec2Id)
